MANAGEMENT'S DISCUSSION AND ANALYSIS

FOR THE THREE MONTHS ENDED MARCH 31, 2022

(EXPRESSED IN CANADIAN DOLLARS UNLESS OTHERWISE NOTED)

GLOBALBLOCK DIGITAL ASSET TRADING LIMITED
Management's Discussion & Analysis
(Expressed In Canadian Dollars Unless Otherwise Noted)
Three Ended March 31, 2022

Introduction

This Management's Discussion and Analysis ("MD&A") of the financial condition and results of the operations of GlobalBlock Digital Asset Trading Limited (the "Company" or "GBDAT") constitutes management's review of the factors that affected the Company's financial and operating performance for the three months ended March 31, 2022 and 2021. This MD&A was written to comply with the requirements of National Instrument 51-102 – Continuous Disclosure Obligations. This discussion should be read in conjunction with the audited annual consolidated financial statements of the Company for the years ended December 31, 2021 and 2020, together with the notes thereto and the unaudited condensed consolidated interim financial statements for the three months ended March 31, 2022. Results are reported in Canadian dollars, unless otherwise noted. Information contained herein is presented as at June 01, 2022 unless otherwise indicated.

The Company applies International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB") and interpretations issued by the IFRS Interpretations Committee ("IFRIC") in preparing the aforementioned financial statements of the Company.

For the purposes of preparing this MD&A, management, in conjunction with the Board of Directors of the Company (the "Board"), considers the materiality of information. Information is considered material if: (i) such information results in, or would reasonably be expected to result in, a significant change in the market price or value of the Company's common shares; (ii) there is a substantial likelihood that a reasonable investor would consider it important in making an investment decision; or (iii) it would significantly alter the total mix of information available to investors. Management, in conjunction with the Board, evaluates materiality with reference to all relevant circumstances, including potential market sensitivity.

Further information about the Company and its operations can be obtained from the offices of the Company or on SEDAR at www.sedar.com.

Cautionary Note Regarding Forward-Looking Information

This MD&A contains certain forward-looking information and forward-looking statements, as defined in applicable securities laws (collectively referred to herein as "forward-looking statements"). These statements relate to future events or the Company's future performance. All statements other than statements of historical fact are forward-looking statements. Often, but not always, forward-looking statements can be identified by the use of words such as "plans", "expects", "is expected", "budget", "scheduled", "estimates", "continues", "forecasts", "projects", "predicts", "intends", "anticipates" or "believes", or variations of, or the negatives of, such words and phrases, or statements that certain actions, events or results "may", "could", "would", "should", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause actual results to differ materially from those anticipated in such forward-looking statements. The forward-looking statements in this MD&A speak only as of the date of this MD&A or as of the date specified in such statement.

Inherent in forward-looking statements are risks, uncertainties and other factors beyond the Company's ability to predict or control. Please also make reference to those risk factors referenced in the "Risk Factors" section below. Readers are cautioned the assumptions underlying such statements may prove to be incorrect. Actual results and developments are likely to differ, and may differ materially, from those expressed or implied by the forward-looking statements contained in this MD&A.

Forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause the Company's actual results, performance or achievements to be materially different from any of its future results, performance or achievements expressed or implied by forward-looking statements. All forward-looking statements herein are qualified by this cautionary statement. Accordingly, readers should not place undue reliance on forward-looking statements. The Company undertakes no obligation to update

GLOBALBLOCK DIGITAL ASSET TRADING LIMITED
Management's Discussion & Analysis
(Expressed In Canadian Dollars Unless Otherwise Noted)
Three Ended March 31, 2022

publicly or otherwise revise any forward-looking statements whether as a result of new information or future events or otherwise, except as may be required by law. If the Company does update one or more forward-looking statements, no inference should be drawn that it will make additional updates with respect to those or other forward-looking statements, unless required by law.

2022 Corporate Highlights and Subsequent Events

In addition, during the three months ended March 31, 2022, the Company's highlights included:

- As at March 31, 2022, the Company had \$3.1 million in working capital (December 31, 2021 - \$4.3 million) and cash on hand of \$1.9 million (December 31, 2021 - \$3.1 million).
- Earned revenues of \$470,670; using cash in operations of \$1,145,402 and having a net loss for the three months ended March 31, 2022, of \$1,930,728,
- Announced the appointment of Cindy Berichon as Head of Marketing and Amaan Jalwa as CFO of the Company.
- We have managed to shift our technology resources and our app is now on track for early H2 release alongside a digital marketing plan to target High Net Worth Individuals (HNWIs) in the UK.
- the Company's technology plans have made significant progress in terms of their flexibility and scope by the design of the GlobalBlock Engine, a platform whose data aggregation and reporting abilities will have the ability to enable both accurate and timely financial reporting alongside incorporating new crypto asset classes and trading partners.
- Interest in Decentralised Finance (DeFi) grew from professional trading clients.
- Regulatory hurdles in Q1 have presented greater longer-term opportunity. The Company withdrew from the FCA's (defined below) Temporary Registration Regime on March 24th, after significant consultation with legal and compliance experts. Working alongside the FCA, the Company agreed to immediately halt the onboarding of new clients and to wind-down its UK crypto trading function by 25th May.
- Back up plans to cater for such a scenario had already been discussed, with GlobalBlock Europe, UAB having been incorporated on the 18th of March in Lithuania. The Company now has its trading function based offshore (i.e., not in the UK) and an MLRO based in Lithuania and is registered as a Virtual Asset Service Provider with the FCIS in Lithuania.
- As a result, the Company can still service and on-board UK clientele and will monitor and adapt to the developing regulatory regime in Europe such that it will be able to target the 300m population of Europe once the EU's MiCA regime comes into force, expected in 2024.

In March 2022, the Company announced the incorporation of GlobalBlock Europe UAB in the European Union jurisdiction of Lithuania, and the Company's transition to become a European based Virtual Asset Service Provider. Concurrently, the Company announced it was withdrawing from the Financial Conduct Authority ("FCA") registration process in the UK and completed the transition as a Virtual Asset Service Provider in Europe on May 25, 2022, with all clients transitioned to GlobalBlock Europe UAB at this time. The Company's services and offerings will all remain unchanged, and a European Union base is expected to have greater potential growth in the long term.

Description of Business

GBDAT is a publicly traded holding company (TSX Venture: BLOK) whose wholly owned subsidiary, GlobalBlock Europe UAB ("GBE" or "GlobalBlock Europe") is a Lithuania based digital asset broker that provides a personalised telephone brokerage service, trading platform and mobile app. Established in 2018 by an experienced team of financial services professionals, GBE acts as a trusted agent serving the digital asset needs of individuals, corporates, institutional financial firms and intermediaries, providing best execution trading and safe custody of digital assets.

Outlook

In conjunction with the acquisition of GlobalBlock UK's brokerage business, the Company's focus has moved towards the development and adoption of digital assets, services and platforms. Recently, there has been an operational shift towards this business, its growing revenues and the exciting opportunity it presents. GlobalBlock Europe offers over 100 digital assets to trade via the phone and secure messaging along with a mobile app and web-based platform. GlobalBlock Europe is upgrading this technology, where it will own 100% of the IP for its new mobile app due to launch in H2 2022. Continuing momentum to build out the infrastructure to support growth in 2022, alongside maintaining its commitment to regulation, security and transparency will be key to leveraging the Company's marketing program. The "refreshingly human" campaign was rolled out as a soft launch in late 2021 and into 2022, and will be optimised and scaled up to coincide with the launch of the new mobile app. Further upgrades to this app are planned throughout H2 2022, enabling features that will mark GlobalBlock Europe as a real differentiator in the digital asset ecosphere. Further product launches are in the pipeline, dependent upon regulatory attitude and guidance with regard to potential income streams such as decentralised finance (DeFi), staking and cryptocurrency node operation. The Company's brand and presence is growing substantially, with ever increasing exposure at key digital asset events and across targeted media channels. The team has extensive knowledge in digital assets, and this is conferred to mainstream media outlets who regularly cover the Company in press articles, helping increase the business's share of voice.

The transition to the European entity completed on May 25 2022, and the Company's focus will still remain on servicing its existing client base and increasing market share. As the regulatory regime in Europe develops with Market in Crypto Assets Regulation (MiCA) and its currently scheduled readiness for 2024, the Company looks forward to meeting those requirements and developing its European client base. There are unknown risks as to the details of MiCA and how this may affect the business.

On April 29th management applied for a Management Cease Trader Order (MCTO) which was subsequently approved and then lifted on 31st May. The revenue testing for the Company's audited annual financials was extremely rigorous thanks to increased regulatory scrutiny over the crypto asset ecosphere and proved to be a through test of the company's systems and controls. The aggregation of data sets from various counterparties where there are no general data reporting standards led to delays in filing the accounts and therefore drove the application for the MCTO. This process has driven technology improvements that will lead to vastly more efficient reporting abilities and enable GlobalBlock to scale its business effectively.

Recent macro economic events have knocked financial asset prices in general and crypto has not been immune. Furthermore, the crypto ecosystem has endured its own problems with the early May implosion of the UST/Luna protocol. This serves as a general reminder of the risks involved. On the positive side, other stable coins held their pegs and coped with all related redemption pressures in an orderly fashion, not requiring any assistance from any centralized party. Future iterations of stable coins will learn from the UST/Luna weaknesses and the asset class will become stronger. Nevertheless, heightened risk awareness and caution is the modus operandi for the Company and its counterparties as a result. The general outlook for cryptocurrencies over the longer term is extremely bright with institutional interest and adoption growing alongside real-world use cases and understanding of the technology's strengths and benefits. At some point in the not too distant future it is expected that all tradeable assets will be transacted on crypto-protocols.

Discussion of Operations

Financial Performance

GLOBALBLOCK DIGITAL ASSET TRADING LIMITED
Management's Discussion & Analysis
(Expressed In Canadian Dollars Unless Otherwise Noted)
Three Ended March 31, 2022

The results for the three months ended March 31, 2022, are not comparable to the same periods in the prior year given the Company's significant acquisition of GlobalBlock UK in July 2021; prior to this date, GBDAT's operations primarily consisted of holding costs, such as legal, accounting and audit and general and administrative.

For the three ended March 31, 2022, the Company incurred a comprehensive net loss of \$2,027,860 (2021 - \$245,571). The trading loss for the three months ended March 31, 2022, was \$1,803,203, and the significant components included the following:

	3 Months ended March 31, 2022	Explanation
<i>Revenue</i>	\$470,670	<ul style="list-style-type: none"> - Revenue earned from brokering services during 01 Jan 2022 to 31 March 2022 - Includes over 900 trades, indicating an average value per trade for the period of Jan – Mar 2022 of \$522
<i>Wages & payroll</i>	\$742,128	<ul style="list-style-type: none"> - Compensation includes new management - Team in UK includes over 24 employees, including a sales team prepared for outreach
<i>General & admin</i>	\$586,543	<ul style="list-style-type: none"> - Includes legal, accounting and audit professional fees of \$291,113 which is higher due to increase in audit fees, as well as ongoing assistance as the Company evaluates additional jurisdictions and compliance. - D&O insurance costed \$45K based on accrual accounting. - Includes \$74,817 of IT operations to support the platform and mobile app, as well as a customer relationship management system and other integrations - \$78,750 was spent in consulting for GB Canada entity - \$67,299 was rent cost for London office. - G&A also includes rent, insurance, listing fees, and other administrative items
<i>Sales & marketing</i>	\$137,725	<ul style="list-style-type: none"> - \$35K was spent on PR activity and \$50k was expensed for hiring Head of Marketing in London office. - Includes fees to update Company's websites, branding, and media, and development of marketing campaign
<i>Share-based payments</i>	\$196,502	<ul style="list-style-type: none"> - Share-based payments relates to the vesting of options granted throughout Q1 2022

Other items for the three months ended March 31, 2022, included:

- *Fair value adjustments* \$83,813 – this relates to fair value adjustments on the digital assets held and converted, which are collected as revenue for brokering services.
- Foreign exchange loss of \$281,844
- Cumulative translation adjustment of \$306,450. This relates to revaluation differences between monetary and non-monetary balances. Average Fx rate for the quarter is 1.2668 & Fx rate at as 31 March 2022 is 1.2507

Liquidity and Financial Position

GLOBALBLOCK DIGITAL ASSET TRADING LIMITED
Management's Discussion & Analysis
(Expressed In Canadian Dollars Unless Otherwise Noted)
Three Ended March 31, 2022

As at March 31, 2022, the Company held unrestricted cash of \$1,930,728 and had working capital of \$3,110,986. Included in working capital is \$644,453 of digital assets held on account of the Company. . For the three months ended March 31, 2022, the Company used cash in operation of \$1,145,402, while cash used in investing activities was \$71,742, and cash provided by financing activities was \$0.

The Company's ability to continue as a going concern is dependent upon its ability to achieve profitable operations. The Company may need to obtain additional funding from loans or equity financings or through other arrangements. Although the Company has been successful in the past in obtaining financing, there is no assurance that it will be able to obtain adequate financing in the future or that such financing will be on terms advantageous to the Company.

Selected Quarterly Information

Three Months Ended	Revenues (\$)	Net Loss (\$)	Net Loss (Per Share) (\$)
March 31, 2022	470,670	2,027,860	(0.02)

Related Party Transactions

The amounts in the table below are amounts recognized as expense related to directors and senior officers identified as key management personnel by the Company, which includes the directors, CEO, CFO, COO and T. Bullman, K. Thompson and P. Bullman. The following table is for the three months ended March 31, 2022 and 2021:

	2022	2021
Paid to the Company's CEO	\$ 35,661	36,635
Paid to the Company's COO	30,567	-
Paid to a company controlled by the CFO	78,750	7,500
Paid to the Company's former CFO	-	-
Paid to the Company's former executive chairman	-	-
Paid to key management of GB UK	91,700	-
Paid to non-executive directors	14,750	17,750
Paid to a law firm which has a former director as a partner	69,240	59,039
Rent paid to a company controlled by officers of the Company	67,247	-
Share-based compensation	54,805	-

GLOBALBLOCK DIGITAL ASSET TRADING LIMITED
Management's Discussion & Analysis
(Expressed In Canadian Dollars Unless Otherwise Noted)
Three Ended March 31, 2022

As at March 31, 2022, \$92,288 was due to related parties and included in accounts payable and accrued liabilities.

Off-Balance-Sheet Arrangements

The Company does not have any off-balance-sheet arrangements that have, or are reasonably likely to have, a current or future effect on its results of operations or financial condition, including, without limitation, such considerations as liquidity, capital expenditures and capital resources that would be considered material to investors.

Share Capital

As of the date of this MD&A, the Company had 104,948,741 issued and outstanding common shares and outstanding dilutive instruments as follows:

- i) 140,000 agent's options, \$1.50 exercise price, expiring in April 1, 2023
- ii) 650,525 options, \$0.95 exercise price, expiring June 5, 2023
- iii) 300,000 options, \$0.23 exercise price, expiring June 13, 2024
- iv) 1,330,000 options, \$0.82 exercise price, expiring July 22, 2026
- v) 1,000,000 options, \$0.95 exercise price, expiring August 9, 2026
- vi) 250,000 options, \$0.71 exercise price, expiring December 2, 2026
- vii) 250,000 options, \$0.34 exercise price, expiring March 14, 2027

In addition, as of the date of this MD&A, there are 33,915,000 shares in escrow to be released in tranches through to July 2023.

Financial instruments and digital asset risk

As at March 31, 2022, the Company's financial instruments consist of cash, cash held for clients, receivables, deposits, accounts payable and accrued liabilities and client deposits liability. As at 31 March 2022 the Company had \$1,252,243 assets staked as DeFi and \$3,487,701 as DeFi asset inventory.

The platform/DeFi provider accepts BTC, ETH or USD stable coins. As at reporting date i.e., 01 June 2022, the Company does not have any risk associated with DeFi as all the investments were liquidated and returned to customers. Cryptocurrencies held by under DeFi do not enjoy the same protections as are available in respect of traditional bank deposits and financial products.

DeFi platforms are under no duty to return to you the same cryptocurrencies originally delivered to, or otherwise held by, us, but where necessary we will return equivalent cryptocurrencies of an identical type, and in the same nominal amount, of the relevant cryptocurrencies to you; and the platforms have the Company's consent that the DeFi platform may deposit, transfer, lend, pledge, repledge or otherwise Risk Disclosures

Below are the risk factors associated with DeFi investments:

Volatility: Cryptocurrencies are more volatile relative to most fiat currencies and other assets and this unpredictability of their price may result in significant loss over a short period of time. DeFi platforms are not responsible for the cryptocurrencies market and make no representations or warranties concerning the real or perceived value of any cryptocurrencies, and the quality, suitability, usefulness, accuracy, or completeness of any data provided by us.

GLOBALBLOCK DIGITAL ASSET TRADING LIMITED
Management's Discussion & Analysis
(Expressed In Canadian Dollars Unless Otherwise Noted)
Three Ended March 31, 2022

Not legal tender: Cryptocurrencies are not money or legal tender, are not backed by any government or central banks and mostly do not have any underlying assets, revenue stream, or another source of value.

Deposit insurance: DeFi platforms are not a bank or depository institution. They are not covered by insurance against losses or subject to any Deposit Guarantee Scheme, Federal Deposit Insurance Protection, or Securities Investor Protection Corporation protections or the protections of any comparable organisation in other jurisdictions.

Regulatory status: The regulatory status of cryptocurrencies is currently unsettled, varies among jurisdictions and is subject to significant uncertainty. Legislative and regulatory changes or actions relating to cryptocurrencies or blockchain technology at a domestic, international, or supranational level may adversely affect or restrict, as applicable, the use, transfer, exchange and value of cryptocurrencies, as well as the provision of our services.

Fraud: The nature of cryptocurrencies may lead to an increased risk of fraud or cyberattack and any losses due to fraudulent or accidental transactions will not be recoverable. The fair values of financial assets and financial liabilities are characterized using a hierarchy as follows:

Level 1 – quoted prices in active markets for identical assets or liabilities.

Level 2 – inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly (i.e. - as prices) or indirectly (i.e.: derived from prices); and

Level 3 – inputs for the asset or liability that are not based on observable market data.

(ii) Credit risk

Credit risk is the risk of loss associated with a counterparty's inability to fulfil its payments obligations. The Company's maximum exposure to credit risk at the reporting date is the carrying value of cash and cash on deposit with exchanges and third parties. The Company has no interest-bearing debt. The Company manages its credit risk by using reputable financial institutions. Management believes that the credit risk concentration with respect to cash held at banks is remote since all cash is held with financial institutions of reputable credit.

The Company limits its credit risk of digital assets by placing these assets with counterparties on which the Company has performed internal due diligence procedures. The Company's ongoing due diligence procedures including procedures around on-boarding new counterparties which includes review of counterparty AML and KYC policies, review of market information specifically regarding various counterparties' security and solvency risk, and monitoring balance limits for each counterparty, as well as security processes around custodial private keys. The Company believe that these processes limit its exposure to credit risk with respect to its digital assets.

(iii) Interest rate risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates. As at December 31, 2021, the Company is not exposed to any significant interest rate risk.

(iv) Currency risk

Currency risk relates to the risk that the fair values or future cash flows of the Company's financial instruments will fluctuate because of changes in foreign exchange rates. Exchange rate fluctuations

GLOBALBLOCK DIGITAL ASSET TRADING LIMITED
Management's Discussion & Analysis
(Expressed In Canadian Dollars Unless Otherwise Noted)
Three Ended March 31, 2022

affect the portion of brokering fee revenues charged in fiat, and the costs that the Company incurs in its operations.

The majority of the Company's expenditures are incurred in the British pound, the functional currency of GlobalBlock UK. GlobalBlock UK most significant denomination of revenue is the British pound, however, it also collects revenue in US dollars, Euro and numerous digital assets. For the Canadian parent, GBDAT, the majority of expenses are incurred in Canadian dollars, which is also the currency in which the Company has historically raised capital and is the functional currency of the entity. While transactions in foreign currencies, and the fluctuation of foreign currencies to each entity's respective functional currency will impact the profitability of the Company, the Company seeks to minimize exposure to currency risk by ensuring revenues and expenses are in the same currency as much as possible.

As of December 31, 2021, the Company's is exposed to USD foreign exchange risk through the financial assets and liabilities denominated in USD with regards to the Company's subsidiary, GB UK. The net monetary position in USD by GB UK as at March 31, 2022 is US\$2,361,142 and a 10% change in the foreign exchange rate would cause a \$300,000 change in Company's net income before taxes.

(v) Liquidity risk

Liquidity risk is the risk that the Company will not be able to meet its obligations as they become due. The Company manages liquidity risk by maintaining cash balances to ensure that it is able to meet its short- and long-term obligations as and when they fall due. The Company manages cash projections centrally and regularly updates projections for changes in business forecasts and fluctuations caused by changes in digital asset prices and foreign exchange rates. All of the Company's liabilities are short term in nature and mature within 30 days of December 31, 2021.

(vi) Digital asset risk

Digital asset prices are affected by various forces including global supply and demand, interest rates, exchange rates, inflation or deflation and global political and economic conditions, as well as general public sentiment. The Company maintains an investment in digital assets as a result of earning revenues denominated in cryptocurrencies which may be subject to significant changes in value and therefore exposed to market risk with the fluctuation in market prices, and in addition, the profitability of the Company is directly related to current and future demand for digital assets. The Company monitors this risk on a daily, weekly and monthly basis to make informed decisions on the degree of exposure the Company has to the volatility of the digital asset market.

(vii) Counterparty risk

The Company holds customers' digital assets through self-custody solutions, Company accounts with crypto asset exchanges and counterparties, and custodians. The Company's custody strategy is designed to support liquidity and efficient trading by ensuring digital assets are readily available to deploy in client requested trades, while ensuring the digital assets are also safeguarded against theft, hacks or security breaches. The Company continuously monitors its cash and digital asset balances maintained with its various counterparties, as well as monitors the counterparties themselves, evaluating their systems, controls, public disclosures, insurance, reputation and liquidity processes. Based on the Company's ongoing diligence of the counterparties, and the available digital assets that can be held, the Company prioritizes holding digital assets at counterparties with external evaluation of their controls (such as SOC reports), self-custody cold storage solutions and counterparties which may offer insurance coverage in certain circumstances.

GLOBALBLOCK DIGITAL ASSET TRADING LIMITED
Management's Discussion & Analysis
(Expressed In Canadian Dollars Unless Otherwise Noted)
Three Ended March 31, 2022

Digital assets are controllable by the possessor of both the unique public key and private key relating to the local or online digital wallet in which the digital assets are held. The networks require a public key relating to a digital wallet to be published when used in a spending transaction and, if private keys are lost or destroyed, this could prevent trading of the corresponding digital asset. Security breaches, computer malware, and computer hacking attacks have been a prevalent concern in the digital asset exchange markets. The Company has committed to securely store all digital assets it holds on behalf of its users and as such the Company may be liable to its users for losses arising from the theft or loss of user private keys. The Company has no reason to believe it will incur any expense associated with such potential liability because i) it has no known or historical experience of claims to use as a basis of measurement ii) it accounts for and continually verifies the amount of digital assets within its control and iii) it has established security around custodial private keys to minimize the risk of theft or loss.

(viii) Permits and licenses

Certain operations of the Company and its operating subsidiaries, GlobalBlock UK and GlobalBlock Europe, require licenses and permits from various governmental authorities.

Regulatory hurdles in Q1 have presented greater longer-term opportunity. The Company withdrew from the FCA's Temporary Registration Regime on March 24th, after significant consultation with legal and compliance experts. Working alongside the FCA, the Company agreed to immediately halt the onboarding of new clients and to wind-down its UK crypto trading function by 25th May.

As a result, GlobalBlock Europe was incorporated on the 18th of March in Lithuania. The Company now has its trading function based offshore (i.e., not in the UK) and an MLRO based in Lithuania and is registered as a Virtual Asset Service Provider with the FCIS in Lithuania.

Due to this change the Company can still service and on-board UK clientele and will monitor and adapt to the developing regulatory regime in Europe.

GlobalBlock Europe was incorporated for the purpose of transitioning the digital asset broker business to Lithuania and becoming a European based Virtual Asset Service Provider (being a virtual currency depository wallet operator and virtual currency exchange operator). While this transition occurred on May 25, 2022, GlobalBlock Europe is not a licensed financial services provider and is not supervised by the Bank of Lithuania. GlobalBlock Europe is supervised by the Financial Crime Investigation Service under the Ministry of Interior of the Republic of Lithuania within the scope of the Law on Prevention of Money Laundering and Terrorist Financing of the Republic of Lithuania and other legislation stemming thereof.

Failure or delays in obtaining necessary approvals for licenses and permits, could have a materially adverse effect on the Company's financial condition and result of operations. Should the Company seek to expand its business, it will need to comply with the laws and regulations of each jurisdiction in which it carries on such business. There is no assurance that the Company (through its operating subsidiaries) will be able to comply with the laws and regulations of each jurisdiction in which it seeks to expand.

The emergence of DeFi subjects us to evolving risks and uncertainties

We have held and may at any point hold investments in select DeFi protocols, both for the company and on behalf of some professional clients. These protocols achieve their investment purposes through self-executing smart contracts that allow users to invest crypto assets in a pool from which other users can borrow without requiring an intermediate party to facilitate these transactions. These investments effectively earn interest to the investor by earning tokens for supplying liquidity to the protocol selected. These tokens fluctuate in their market price and the effective interest earned is dependent upon this price. These investments can generally be withdrawn with no restrictions. However, these DeFi protocols pose

heightened regulatory concerns and are subject to various risks, including the risk that the underlying smart contract is insecure, the risk to lenders that excessive market moves could obliterate collateral held against these loans and that the investor will not be able to recover their initial investment, the risk that any token rewards may experience significant volatility, and the risk that fees build into the protocols can fluctuate and impact returns. If any of these risks materialize, investments in these DeFi protocols may be adversely impacted and all such investments may be lost.

DeFi refers to a variety of blockchain-based applications or protocols that provide for peer-to-peer financial services using smart contracts and other technology rather than such services being offered by central intermediaries. There are numerous DeFi applications and protocols, each with its own unique risks and uncertainties. Common DeFi applications include borrowing/lending digital assets and providing liquidity or market making in digital assets. DeFi applications and ecosystems are demonstrating how public blockchains and smart contracts can revolutionize financial services, but the nascent technology comes with several risks that could materially and adversely affect investments and trading strategies. It is difficult to quantify the amount of leverage that exists within the DeFi ecosystem and price volatility can result in deleveraging that moves asset prices dramatically. In addition, smart contracts may contain bugs which put funds at risk of theft or loss. Furthermore, in certain decentralized protocols, it may be difficult or impossible to verify the identity of a transaction counterparty necessary to comply with any applicable anti-money laundering, countering the financing of terrorism, or sanctions regulations or controls. The complexity and interconnectedness of digital asset networks, applications, and economic systems enables new forms of malicious attacks that leverage a feature or vulnerability of one system to attack another. Such an attack may take the form of a temporary manipulation of the price of certain digital assets that trigger second order behaviors, such as automatic collateral liquidations on decentralized applications or digital asset trading platforms. Such an attack could adversely affect investments. A malicious actor can exploit the structure of one or a series of smart contracts or applications in ways that do not technically constitute exploitation of a "bug" or flaw in the smart contract or application.

The Company has been liaising with a third party DeFi provider for a year, sharing insights and developments in crypto and the DeFi space. The Company has ongoing due diligence processes with this provider and services rendered by them have been at the request of the Company's clients. The DeFi provider is a publicly listed company on the UK's Aquis exchange.

Custody and Safekeeping of digital currencies

As of the date of this MD&A, GlobalBlock Europe only accepts United Kingdom and Lithuania resident clients or customers for its digital asset broker or trading services. To be specific, measures (including comprehensive AML/KYC procedures) have been implemented to prevent residents in the provinces and territories of Canada and the United States from becoming clients or customers owing to regulatory restrictions. The Company aims to conduct business to the highest industry standards and within the constantly developing global, regulatory environment with regards to digital assets.

The Company holds clients' digital assets primarily through self-custody solutions including the Qredo platform (<https://www.qredo.com/>), cold storage, and the Company's accounts with exchanges and liquidity providers ("Trade Providers"). The Company's custody strategy is designed to support liquidity and efficient trading by ensuring digital assets are readily available to deploy in client requested trades, while ensuring digital assets are safeguarded against theft, hacks or security breaches.

The Company prioritizes holding digital assets with Qredo, however, the need for liquidity requires the Company to maintain accounts with exchanges, liquidity providers and hot and cold storage, and Qredo is

Management's Discussion & Analysis
(Expressed In Canadian Dollars Unless Otherwise Noted)
Three Ended March 31, 2022

currently limited in the breadth of currencies it supports. Private keys for hot and cold storage are maintained by officer and director of the Company, while third parties require various levels of authorizations, and where possible, multiple levels of authorization. Settlement procedures by the Company seek to minimize balances held at Trade Providers and ensure that digital assets are settled back within the Company's MPC wallet with Qredo, or where the digital asset is not yet supported by Qredo, the Company's cold storage, a single signatory solution, or at times, select Trade Providers that have robust security procedures, including implementation of MPC. The Company's Trade Providers are primarily located in United Kingdom and the United States, and the Company has a due diligence program it maintains on an on-going basis, for all Trade Providers which includes assessing security, reputation, liquidity levels in applicable digital assets, capitalization, management and ownership, internal control and operational practices, as well as legal and regulatory status. The Company maintains certain IT security protocols to ensure secure access and oversight of Trade Providers and the Company platform to ensure appropriate movement of digital assets.

GBDAT primarily held client assets through the Qredo custodian platform, with 61% of the value of digital assets held at March 31, 2022 held at Qredo, a further 17% held in at Exodus and 13% at CEX.io, both being Trade Providers. Qredo, CEX.io and Exodus are not Canadian or foreign financial institutions and do not have SOC2 attribution, however, Qredo received SOC1 attribution in March 2022. The Company is not aware of any security breaches, computer malware, and computer hacking attacks with Qredo, B2C2 or CEX.io. The Company is unaware of any related parties between itself and Qredo, CEX.io and B2C2, which are based in London, United Kingdom and utilize multi-signature, MPC (multi-party computation), decentralised storage protocol. Qredo currently provides US\$5 million equivalent of insurance per wallet and accepts an ever-growing list of digital assets with more being added on a frequent basis. CEX.io and B2C2 do not provide specific insurance coverage as far as the Company is aware. The Company does not maintain any other insurance and there is no certainty that any insurance claim made to Qredo in the event of theft, or a breach would be successful.

Significant Accounting Judgments and Estimates

The preparation of financial statements in accordance with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenues and expenses during the reporting period. The determination of estimates requires the exercise of judgment based on various assumptions and other factors, such as historical experience and current and expected economic conditions. Actual results may differ from these estimates. See Note 3 of the consolidated financial statements for the three months ended March 31, 2022, for a detailed discussion of significant estimates and critical judgements.

Risks Factors

Permits and licenses

Certain operations of the Company and its operating subsidiaries, GlobalBlock UK and GlobalBlock Europe, require licenses and permits from various governmental authorities. GBDAT operated as a digital asset broker in the United Kingdom under the consent of the Financial Conduct Authority in the United Kingdom until May 25, 2022. GlobalBlock Europe was incorporated for the purpose of transitioning the digital asset broker business to Lithuania and becoming a European based Virtual Asset Service Provider (being a virtual currency depository wallet operator and virtual currency exchange operator). While this transition occurred on May 25, 2022, GlobalBlock Europe is not a licensed financial services provider and is not supervised by the Bank of Lithuania. GlobalBlock Europe is supervised by the Financial Crime Investigation Service under the Ministry of Interior of the Republic of Lithuania within the scope of the Law on Prevention

Three Ended March 31, 2022

of Money Laundering and Terrorist Financing of the Republic of Lithuania and other legislation stemming thereof.

Failure or delays in obtaining necessary approvals for licenses and permits, could have a materially adverse effect on the Company's financial condition and result of operations. Should the Company seek to expand its business, it will need to comply with the laws and regulations of each jurisdiction in which it carries on such business. There is no assurance that the Company (through its operating subsidiaries) will be able to comply with the laws and regulations of each jurisdiction in which it seeks to expand.

Management experience and dependence on key personnel, employees and third-party providers

The Company's success is currently largely dependent on the performance of its directors and officers, and key management and employees of its operating subsidiaries. The management team and key employees have specialized expertise within the cryptocurrency industry. The experience of these individuals is a factor which will contribute to the Company's continued success and growth. The amount of time and expertise expended on the Company's affairs by each of its management team, key management and employees of its operating subsidiaries and the directors will vary according to the Company's needs. The loss of any of these individuals could have a material detrimental impact on the Company's business. The Company does not intend to acquire any key man insurance policies for any of its current executives and key employees, and therefore there is a risk that the death or departure of any key member of management, a director, or employee or consultant could have a material adverse effect on the Company's future. Investors who are not prepared to rely on the Company's management team and board of directors should not invest in the Company's securities.

Competition from other digital asset / cryptocurrency companies

In the cryptocurrency industry, there exist multiple exchanges and brokers offering online trading and wallets. In contrast, the Company (through its operating subsidiaries) delivers best execution for every customer by providing a more personalised platform whereby customers are able to gain access through the telephone brokerage service, trading platform and mobile app of the Company's operating subsidiaries. Other market participants in the cryptocurrency industry include investors and speculators, retail users transacting in cryptocurrencies, and service companies that provide a variety of services including buying, selling, payment processing and storing of cryptocurrencies.

There are material risks and uncertainties associated with the Company's anti-money-laundering ("AML"), "know your customer" ("KYC") and other protocols to detect and deter illegal activity on the Company's platforms

The Company seeks to implement and maintain anti-money-laundering, "know your customer" and other policies and procedures that are consistent with applicable United Kingdom and non-UK law and regulation and with financial services industry best practices. Nonetheless, the Company may not be able to prevent illegal activity from occurring on or through its platforms, including the unauthorized use of a validly opened account. The use of cryptocurrencies or other digital assets for illegal purposes on or through the Company's platforms, or allegations or investigations with respect to potential such use, could result in significant legal and financial exposure to the Company and damage to the Company's reputation. Similarly, failure to meet applicable AML/KYC legal and regulatory requirements could result in regulatory fines, sanctions or restrictions, which in each case could materially and adversely affect the Company's reputation, financial condition, trading execution, and asset value and the value of any investment in the Company. Furthermore, the Company will use and rely on third-party service providers to complete key aspects of AML/KYC screenings. Although the Company will perform due diligence on such providers, there can be no assurance that in all events such providers will detect all potential illegal activity or comply with all aspects of applicable law and regulation. If such a provider were to fail to perform to agreed standards

or maintain full compliance, it could have a material and adverse effect on the Company's business and operations.

The Company's use of proprietary and non-proprietary software, data and intellectual property may be subject to substantial risk

The Company's investment strategy may rely heavily on the use of proprietary and non-proprietary software, data and intellectual property of the Company and third parties in the digital asset sector. The reliance on this technology and data is subject to a number of important risks. First, the operation of any element of the cryptocurrencies or digital assets network or any other electronic platform may be severely and adversely affected by the malfunction of its technology and the technology of third parties. For example, an unforeseen software or hardware malfunction could occur as a result of a virus or other outside force, or as result of a design flaw in the design and operation of the network or platform. Furthermore, if the Company's software, hardware, data or other intellectual property is found to infringe on the rights of any third party, the underlying value of the assets of the Company could be materially and adversely affected. Cybersecurity breaches and other systems and technology problems may materially and adversely affect the Company.

Additional Funding Requirements

Further expansion of the Company's business outside of the United Kingdom and Lithuania, will require additional capital; and the ongoing costs of operations may not generate positive cash flow for the near or long term. There is no assurance that the Company will be successful in obtaining the required financing for these or other purposes, including for general working capital. The Company's ability to secure any required financing to sustain operations will depend in part upon prevailing capital market conditions and business success. There can be no assurance that the Company will be successful in its efforts to secure any additional financing or additional financing on terms satisfactory to management. If additional financing is raised by issuance of additional shares from treasury, control may change, and shareholders may suffer dilution. If adequate funds are not available, or are not available on acceptable terms, the Company may be required to scale back its current business plan or cease operating.

Market Risk for Securities

There can be no assurance that an active trading market for the Company's shares will be sustained. The market price for the Company's shares may be subject to wide fluctuations. Factors such as government regulation, cryptocurrency price fluctuations, share price movements of peer companies and competitors, as well as overall market movements, may have a significant impact on the market price of the Company's securities. The stock market has from time-to-time experienced extreme price and volume fluctuations, which have often been unrelated to the operating performance of particular companies.

Foreign Exchange Risk

The Company is a Canadian company, and most of its fund raising is done in Canadian dollars. Most of the expenses and revenues of the Company's subsidiaries are denominated in British Pounds or Euro. As a result, the Company is subject to foreign exchange risks relating to the relative value of the British Pound or Euro as compared to the Canadian dollar.

Limited operating history

The Company (and its operating subsidiaries) has a relatively limited history of operations in the digital asset / cryptocurrency sector. The Company (and its operating subsidiaries) will be subject to many risks common to start-up enterprises and its viability must be viewed against the background of the risks, expenses and problems frequently encountered by companies in the early stages of development in new

and rapidly evolving markets such as the digital asset / cryptocurrency market. This includes, without limitation, under-capitalization, cash shortages, limitations with respect to personnel, and lack of revenues and/or other resources (financial or otherwise). The Company does not generate significant revenue from operations, and there is no assurance that it will develop its business profitably, and the likelihood of success of the Company must be considered in light of the Company's early stage of operations. There is no assurance that the Company will be successful in achieving a return on shareholders' investment.

Changes in the value of digital assets / cryptocurrencies may affect trading

The markets for digital assets / cryptocurrencies have experienced much larger fluctuations than other markets, and there can be no assurances that erratic swings in price will slow in the future. In the event that the price of cryptocurrency declines, the value of an investment in the Company will likely decline. Several factors may affect the price and volatility of cryptocurrency including, but are not limited to: (i) global cryptocurrency demand, depending on the acceptance of cryptocurrency by retail merchants and commercial businesses; (ii) the perception that the use and holding of cryptocurrency is safe and secure, and the related lack of or inconsistency in regulatory restrictions, particularly across various jurisdictions; (iii) conversely, heightened regulatory measures restricting the use of cryptocurrency as a form of payment or the purchase of cryptocurrency; (iv) investor's expectations with respect to the rate of inflation; (v) interest rates; (vi) currency exchange rates, including exchange rates between cryptocurrency and fiat currency; (vii) fiat currency withdrawal and deposit policies on cryptocurrency exchanges and liquidity on such cryptocurrency exchanges; (viii) interruption of services or failures of major cryptocurrency exchanges; (ix) general governmental monetary policies, including trade restrictions, currency revaluations; (x) global or regional political, economic or financial events and situations, including increased threat or terrorist activities; and/or (xi) self-fulfilling expectations of changes in the cryptocurrency market. As well, momentum pricing is typically associated with assets whose valuation, as determined by the investing public, accounts for anticipated future appreciation in value. Momentum pricing of cryptocurrency may result in speculation regarding future appreciation in the value of cryptocurrency. As a result, changing investor confidence could adversely affect an investment in the Company.

The further development and acceptance of the cryptographic and algorithmic protocols governing the issuance of and transactions in digital assets / cryptocurrencies is subject to a variety of factors that are difficult to evaluate

The use of digital assets / cryptocurrencies to, among other things, buy and sell goods and services and complete other transactions, is part of a new and rapidly evolving industry that employs digital assets based upon a computer-generated mathematical and/or cryptographic protocol. The growth of this industry in general, and the use of cryptocurrencies in particular, is subject to a high degree of uncertainty, and the slowing, or stopping of the development or acceptance of developing protocols may adversely affect the Company's operations. The factors affecting the further development of the industry, include, but are not limited to:

- Continued worldwide growth in the adoption and use of digital assets / cryptocurrencies;
- Governmental and quasi-governmental regulation of cryptocurrencies and their use, or restrictions on or regulation of access to and operation of the network or similar cryptocurrency systems;
- Changes in consumer demographics and public tastes and preferences;
- The maintenance and development of the open-source software protocol of the network;
- The availability and popularity of other forms or methods of buying and selling goods and services, including new means of using fiat currencies.
- General economic conditions and the regulatory environment relating to digital assets; and
- Negative consumer sentiment and perception of digital assets / cryptocurrencies generally.

Acceptance and/or widespread use of digital assets / cryptocurrency is uncertain

GLOBALBLOCK DIGITAL ASSET TRADING LIMITED
Management's Discussion & Analysis
(Expressed In Canadian Dollars Unless Otherwise Noted)
Three Ended March 31, 2022

Currently, there is relatively small use of digital assets/ cryptocurrencies in the retail and commercial marketplace in comparison to relatively large use by speculators, thus contributing to price volatility that could adversely affect the Company's operations, investment strategies, and profitability. As relatively new products and technologies, cryptocurrency has not been widely adopted as a means of payment for goods and services by major retail and commercial outlets. Conversely, a significant portion of cryptocurrency demand is generated by speculators and investors seeking to profit from the short-term or long-term holding of cryptocurrencies. The relative lack of acceptance of cryptocurrencies in the retail and commercial marketplace limits the ability of end users to use them to pay for goods and services. A lack of expansion by cryptocurrencies into retail and commercial markets, or a contraction of such use, may result in increased volatility or a reduction in their market prices, either of which could adversely impact the Company's business.

Misuse of cryptocurrencies and malicious actors

Since the existence of cryptocurrencies, there have been attempts to use them for speculation or malicious purposes. Although lawmakers increasingly regulate the use and applications of cryptocurrencies, and software is being developed to curtail speculative and malicious activities, there can be no assurances that those measures will sufficiently deter those and other illicit activities in the future. Advances in technology could lead to a malicious actor being able to alter the blockchain on which cryptocurrency transactions rely. In such circumstances, the malicious actor could control, exclude or modify the ordering of transactions, or generate new cryptocurrency or transactions using such control. Such changes could adversely affect an investment in the Company.

Uninsured or Uninsurable Risks

The Company intends to insure its operations in accordance with technology industry practice. However, given the novelty of the business, such insurance may not be available, uneconomical for the Company, or the nature or level may be insufficient to provide adequate insurance cover. The Company may become subject to liability for hazards against which it cannot insure or against which it may elect not to insure because of high premium costs or for other reasons. The payment of any such liabilities would reduce or eliminate the funds available for operations. Payments of liabilities for which the Company does not carry insurance may have a material adverse effect on its financial position.

Pandemics and COVID-19

The Company cautions that current global uncertainty with respect to the spread of COVID-19 and its effect on the broader global economy may have a significant negative effect on the Company. The rapid spread of COVID-19 may have a material adverse effect on global economic activity and can result in volatility and disruption to global supply chains, operations, mobility of people and the financial markets, which could affect interest rates, credit ratings, credit risk, inflation, business, financial conditions, results of operations and other factors relevant to the Company.

Disclosure of Internal Controls

Management has established processes to provide them with sufficient knowledge to support representations that they have exercised reasonable diligence to ensure that (i) the consolidated financial statements do not contain any untrue statement of material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it is made, as of the date of and for the periods presented by the consolidated financial statements; and (ii) the consolidated financial statements fairly present in all material respects the financial condition, results of operations and cash flows of the Company, as of the date of and for the periods presented.

GLOBALBLOCK DIGITAL ASSET TRADING LIMITED
Management's Discussion & Analysis
(Expressed In Canadian Dollars Unless Otherwise Noted)
Three Ended March 31, 2022

In contrast to the certificate required for non-venture issuers under National Instrument 52-109 Certification of Disclosure in Issuers' Annual and Interim Filings ("NI 52-109"), the Company uses the Venture Issuer Basic Certificate, which does not include representations relating to the establishment and maintenance of disclosure controls and procedures ("DC&P") and internal control over financial reporting ("ICFR"), as defined in NI 52-109. In particular, the certifying officers filing this certificate are not making any representations relating to the establishment and maintenance of:

i) controls and other procedures designed to provide reasonable assurance that information required to be disclosed by the issuer in its annual filings, interim filings or other reports filed or submitted under securities legislation is recorded, processed, summarized and reported within the time periods specified in securities legislation; and

ii) a process to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the issuer's generally accepted accounting principles (IFRS). The Company's certifying office are responsible for ensuring that processes are in place to provide them with sufficient knowledge to support the representations they are making in this certificate.

Investors should be aware that inherent limitations on the ability of certifying officers of a venture issuer to design and implement on a cost-effective basis DC&P and ICFR as defined in NI 52-109 may result in additional risks to the quality, reliability, transparency and timeliness of interim and annual filings and other reports provided under securities legislation.
